The patent discloses a DNA molecule encoding a fusion protein comprising a signal sequence, an immunoglobulin Fc region, and an angiogenesis inhibitor selected from angiostatin, a collagen DNA plasminogen fragment activity, a collagen XVIII fragment having angiostatin activity, a collagen XVIII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours, tumour metatasis, benign tumours including hammangiomas, accustic neuromas, neurofibromas, trachomas and pyrogenic cyamulomas, returnopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental flarmentation, rubeosis and osler Webber syndrome; myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, and excessive or abnormal stimulation of endothabial cells, intestinal cells, atherosciarosis, sclerodermal and hypertrophic scars, i.e. Reloid scars. The DNA constructs may be used in gene therapy. The present sequence is a DNA encoding canine endostatin or fermannal colls, and cars. The DNA constructs may be used in the construction of immunofusin containing canine immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

The novel factor is derived from endostatin (using PCR to screen a human foetal kidney cell cDNA library) and human IgGIFC. The product of the invention can specifically inhibit tumour vascular endothelial proliferation and can be used for curing several tumour types. This sequence encodes a fusion construct composed of human endostatin and human IgGIFC, described in the disclosure of the invention

```
The present sequence encodes an endostatin protein which is the carboxy terminal protein of human collagen XVIII. Recombinant mouse endostatin (20 mg/kg) was administered subcutaneously to mice implanted with Lewis (10 mg/kg) was administered subcutaneously to mice implanted with Lewis care in a carcinomas. There was tumour mass regression non-detectable levels after 12 days of therapy due to the angiogenesis inhibitory activity of endostatin. Thus the protein is useful for treatmen of angiogenesis.

CC endostatin are useful for treating and diagnosis of tumours, ocular plaque neovascularisation, telanglectasia, haemophiliac joints, angiogenic diseases, Osler-Webber Syndrome, myocardial angiogenesis, cangiofibroma and wound granulation, for treatment of diseases related to angiofibrom and wound granulation, for treatment of diseases related to angiofibrom and wound granulation of endothelial cells e.g. intestinal adhesions, atherosclerosis, scleroderma. The protein may also be useful ovascularisation. The gene for endostatin may be isolated from cells, by the name of the man anglifying the name of the care and then amplifying the control and the single reverse transcriptase and then amplifying

This invention describes a novel viral gene therapy vector comprising a nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or murine and sociation and angiogenesis-inhibiting fusions and fragments, where the viral vector is sufficiently attenuated for use in human gene therapy. The products of the invention activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the victuity of the retina. The vector is administered to cells exvivo and then administered to the patient
                                                                                 Plasminogen; human; angiostatin; endostatin; gene therapy; vector; anti-angiogenic; attenuation; cytostatic; anti-diabetic; ophthalmology; tumour growth; solid tumour; diabetic retinopathy; retina; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 549 BP; 82 A; 196 C; 178 G; 93 T; 0 U; 0 Other;

Li Y, Gillies SD;

Ιо K,

Novel fusion protein of angiostatin or endostatin and an immunoglobulin FC region, useful for treating conditions mediated by angiogenesis, such as rheumatoid arthritis, tumors and macular degeneration.

Claim 12; Page 40-41; 68pp; English.

The patent discloses a DNA molecule encoding a fusion protein comprising a signal sequence, an immunoglobulin Fc region, and an angiogenesis inhibitor selected from angiostatin, endostatin, a plasminogen fragment having angiostatin activity, a collagen NVIII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated

AAA29884 standard; cDNA; 549 BP.

by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours, tumour metastasis, benign tumours including the conditions acoustic neuromas, neurofibromas, trachomas and pyrogenic granulomas, rechomas and pyrogenic carminomas, retemperation, recipied architis, psoriasis, ocular angiogenic diseases of diabetic retinopathy, retinopathy of prematurity, macular diseases of diabetic retinopathy, retinopathy of prematurity, macular fibroplasia, roundaring and section neovascular glaucoma, retrolental fibroplasia, rubeosis and Osler-Webber syndrome; myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints' angiofibroma, wound granulation, and excessive or abnormal stimulation of endothabilal cells, intestinal cells, atherosoclerosis, solerodermal and hypertrophic scars, i.e. keloid scars. The DNA constructs may be used in the construction of immunofusin containing human endostatin used in the construction of immunofusin containing human immunoglobulin gamma (IgG) Fc fragment. Note: This sequence is stated in claim 12 as the specification refers to this sequence as being nucleotide sequence of human endostatin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  360

The present invention also describes: (1) preparation of (I) and its derivative; (2) an IAF binding acceptor and its preparation; and (3) an IAF antibody. (I) is useful for preparing new biological preparations for effectively treating various tumours and abnormal-vessel diseases. The IAF antibody is preferably a polyclonal antibody, mosaic antibody, single stranded antibody and human originated 9 Angiogenesis inhibiting factor 1 and its derivative useful for treating 1 CACACCCACCAGGACTTCCAGCTGGTGCTGCTGGTGGCCCTGAACAGCCCGCAGCCG drececeneces de consecuentes de la consecuencia de la consecuente de la consecuencia del la consecuencia de  la consecuencia de la CCCAGCTGGGAGGCCTTATTCTCGGGCTCCGAGGGCCAGCTGAAGCCCCGGGGCCCGCATC cccaectesasses cretaricas de concas de contra d TTCTCTTTCGACGGCAGAGATGTCCTGCAGCACCCCGGCCTGGCCCCGGAAGAGCGTGTGG CACGGCTCCGACCGCGGCGCCTGACCGACAGCTACTGCGAGACGTGGCGACGACG egacingacceachcciriccegaccrirectercareachaganccicinachachic descridecedecaccrirccidececrirccricitedecedecerecadascereradadascere GIGCGCCGCCGACCGCGCTGCCCGTCGTCAACCTCAGGGACGAGGTGCTCTTC trerecritadaededaadaedrereaddedeeceeeceeeceadaadaadeeceee edcescarecesescarcescesescesacriceasiscascascesesceses Gaps Human, anglogenesis inhibiting factor 1; IAF-1; tumour; antibody; abnormal vessel disease; ss. ö 75.3%; Score 418; DB 3; Length 549; llarity 85.3%; Pred. The sequence encodes Human Endostatin(TM). The new method of the invention is useful for producing, recovering and purifying Endostatin (TW) from biological sources, such as biological funds, itssues, cells, culture media, and fermentation media. Endostatin(TM) is useful for treating angiogenesis mediated diseases anch as solid timours, blood treating angiogenesis mediated diseases uch as solid timours, blood borne tumours, leukaemias, tumour metastases, benign timours, e.g. haemangioma, acoustic neuromas, neurofibromas, rachomas, and pyogenic granulomas, rheumatoid arthritis, psoriasis, ocular angiogenic diseases, e.g. diabetic retinopathy retinopathy of prematurity macular of Gencer, retrolental fibroplasia, rubeosis, Osler-Webber Syndrom, or man angiogenesis, plaque neovascularisation, telangiectasia, myocardial angiogenesis, plaque neovascularisation, telangiectasia, cancer, retrolental fibroplasia, rubeosis, Osler-Webber Syndrom, or man angiotic moderna, and wound avanulation. Endostatin(TW) is also useful for treating disease of excessive or abnormal stimulation of endothelial cells such as intestinal adhesions, atherosclerosia, solicologically active Endostatin(TW) are obtained by the new method biologically active Endostatin(TW) are obtained by the new method also subjected to lyophilisation, while presserving biological activity. Centrifugation of broth from fermentation steps in production is avoided, cheric and proteine, plaments, enzymes and other cellular cellular and other cellular cellular and other cellular sendentals and other sendentals and other sende Producing Endostatin protein for treating angiogenesis mediated diseases such as solid tumors, comprises recombinantly producing the protein using an expression system, and recovering and purifying the protein. This sequence encodes endostatin. Endostatin is a 20 kD C-terminal fragment of collagen XVIII that inhibits angiogenesis. The endostatin coding sequence may be used in the recombinant viral vector of the invention for obtaining angiostatin activity. The vector comprises a promoter capable of expressing human argiostatin operably linked to a structural gene encoding one or more domains of human angiostatin. The vector, which may be a replication-defective viral vector, is useful for inhibiting angiogenesis in a mammal, especially with cancer or a tumour specification as an amino acid sequence New recombinant viral vector expressing human angiostatin useful for inhibiting angiogenesis in a mammalian subject with cancer or tumor. Example 4; Page 80-82; 83pp; English.

combinations of angiostatin, endostatin, interferon, thrombospondin, interferon-inducible protein and platelet factor 4, and have antiented angiogenic and/or anti-tumor activity. The multifunctional protein may exhibit useful properties such as having similar or greater biological activity when compared to a single factor or by having improved half-life or decreased adverse side effects, or a combination of these properties. The proteins can be used for treating an angiogenic-mediated disease, e.g. cancer, diabetic retinopathy, macular degeneration, or arthritis. They can also be used for inhibiting the production of tumor cells (characteristic of lung, breast, ovarian, proteite, pancreatic, gastric, colon, renal, bladder cancers; melanoma, hepatoma, sarcoma and lymphoma) in a patient and for inhibiting tumor growth. The present sequence is used in the course of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

This invention relates to angiogenesis-inhibiting protein receptors, and the DNA sequences encoding them. Angiogenesis is the generation of new blood vessels into a tissue, and normally occurs in wound healing, foetal and embryonal development and the formation of the corpus luteum, endometrium and placenta. Angiostatin is a protein (see AAB16450 and AAA68202) involved in angiogenesis, and has an amino acid sequence similar to that of a plasminogen fragment (see murine plasminogen Endostatin is also an angiogenesis inhibiting protein sequences of human laminin. Laminin is an angiostatin binding protein. Endostatin is also an angiogenesis inhibiting protein binding protein, and some of the peptides of the invention share homology with regions of laminin. Peptides AAB16452 = 181621 (excluding AAB16490) are the angiogenesis-inhibiting protein receptor fragments of the invention. The peptides bind either angiostatin or endostatin and can be used in methods for treating diseases and processes that are mediated by angiogenesis, creating diseases and processes that are mediated by angiogenesis, crubeosis, diabetic retinopathy, arthritis, wound healing, peptic ulcers, Helicobacter related diseases, fractures, placentation and cat scratch fever. They are useful for the detection and prognosis of cancer. DNA sequences A628241 encode the peptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GEGCTGGCCGGCACCTTCCGGGCCTTCGTCGCGCCTGCAGGACCTCTACAGCATC 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               121 dedeirdecedeceretrecececertrecresecereceage creasecare 180

The present sequence encodes human endostatin. The protein is expressed in Streptomyces. Leader sequences of Streptomyces sp. strain CS SupA and St. vensculae alpha-amylase proteins are linked to the N-terminal of endostatin. This ensures that endostatin protein is produced as a secreted, soluble protein which needs no refolding, is stable in the termination broth and is produced in large quantities. The method is used for preparing soluble recombinant human, murine or primate endostatin, which is useful in the treatment of cancer, inhibition of

tumour growth, inhibition of angiogenesis, isolation of receptors for endostatin and for identification of anti-angiogenic compounds in assays. The endostatin protein is produced as a secreted, soluble protein which needs no refolding, is stable in the fermentation broth and is produced in large quantities. Streptomycetes are amenable for cultivation in large fermentations allowing for large quantities of soluble endostatin to be produced
                                                                                                                                                                                                                                                                                                                             120

The present invention provides endostatin peptides which can be used in the modulation of angiogenesis. This is useful in the treatment of cancers, inflammation, rheumatoid arthritis, chronic articular rheumatism, psoriasis, disorders associated with inopportune invasion of vessels such as diabetic retinopathy, neovasular glaucoma, retinopathy of prematurity, macular degeneration, corneal graft rejection, retroiental fibroplasia, rubeosis, capillary proliferation in atherosclerotic plaques and osteoporosis. Other angiogenesis-dependent diseases include Osler-Webber syndrome, myocardial angiogenesis, plaque neovasculisation, telanglectasia, haemophiliac joints and wound granulation. In addition, the peptides can be used as birth control

Endostatin peptide comprising at lesst four endostatin amino acid residues are e.g. angiogenesis inhibitors for treating cancer and diabetic retinopathy.

The present invention relates to methods and compositions of inhibiting angiogenesis. The method comprises administering to a human or animal a composition comprising a protein that is homologous to PITGELER protein. Kinases (PK) and an angiogenic factor. The method is useful for regulating angiogenic feator. The method is useful for degeneration, and diabetic retinopathy. The compositions are useful in treating diseases The method and compositions are inhibiting angiogenic related diseases. The method and compositions are useful in treating diseases and processes that are mediated by angiogenesis including haemangioms, solid tunnours, blood borne tumours, leukaemia, metastasis, telangiectasia, psoriasis, solid tumours, blood borne tumours, cundant myocardial angiogenesis, Crohn's disease, plaque neovascularisation, coronary collaterals, cerebral collaterals, arteriovenous malformations, isolatemic limb angiogenesis, cornal diseases, rubeosis, neovascular glaucoma, diabetic retinopathy.

Tetrolortal fibroplasia, arthritis, diabetic neovascularisation, macular degeneration, wound healing, peptic ulcer, Helicobacter related diseases, fractures, keloids, vasculogenesis, hemmatopolesis, ovulation, mentruation, provides a therapy for cancer that has minhal side effects.

The present sequence encodes human endostatin which is used to generate

i Sequence 4, Application US/08159784

i Patent No. 5643783

GENERAL INFORMATION:

APPLICANT: Bjorn R. Olsen

TILLE OF INVENTION: NOVEL COLLAGEN AND USES THEREOF

NUMBER OF SEQUENCES: 9

CORRESPENDENCE: 9

CITY: BOSTON

STREET: 225 Franklin Street

CITY: BOSTON

STATE: Massachusetts

COUNTRY: BOSTON

STATE: Massachusetts

COMPUTER: READABLE FORM;

MEDIUM TYPE: 3.5" Diskette, 1.44 Mb

COMPUTER: IBM PS/2 Model 50Z or 55SX

OPERATING SYSTEM: MS-DOS (Version 5.0)

SOFTWARE: MOXGDERECT (Version 5.0)

SOFTWARE: December 1, 1993 'A

FILING DATE: December 1, 1993 'A

FILING DATE: December 1, 1993 'A

Sequence 12, Application US/09561500

Sequence 12, Application US/09561500

Patent No. 634229

GENERAL INFORMATION:

APPLICANT: Philip E. Thorpe

APPLICANT: Rolf A. Brekken

TITLE OF INVENTION: ANTIBODY COMPOSITIONS FOR SELECTIVELY INHIBITING VEGF

FILE REPREMECE: 4001.002500

CURRENT APPLICATION NUMBER: US/09/561,500

CURRENT APPLICATION NUMBER: 06/131,432

PRIOR PRILING DATE: 1999-04-28

NUMBER OF SEQ ID NOS: 44

SOFTWARE: Patentin Ver. 2.0
